Giving Hope, Touching Lives

Mr. Goh's Story

Here is the story of Mr K A Goh, a 52-year old father of two who was helped by the NCIS Endowment Fund after he was diagnosed with Myelodysplastic Syndromes (MDS), a group of disorders affecting the blood and bone marrow.

"After I was diagnosed with cancer, I was unable to work. As I was a permanent resident, I was not eligible for Medifund and my wife had to quit her job as a factory operator to care for me.

Our savings soon ran out.

However, we found out about the Endowment Fund and applied for it. We received assistance of almost $10,000 over two years to help pay for my consultation visits, tests, stem cell transplant and medications.

I am very grateful for the help NCIS has given me. It has given me another chance to live and enjoy precious moments with my family."
